

PassPort Quick Setup

Internet Connection Methods:

- 
- 1. 4G/LTE USB Dongle:**
 - The PassPort offers multiple internet connection options.
 - One option is to use a 4G/LTE USB dongle with an active SIM card.
 - Simply plug the 4G USB dongle into any of the USB ports to enable instant internet connectivity without the need for additional configuration.
 - When using this setup, you can access the Node-RED editor by connecting through the VPN link provided by Smithtek or directly through the same USB Wi-Fi dongle.
 - 2. Wi-Fi Connection:**
 - To connect the PassPort to a local Wi-Fi hotspot, you'll need to configure it through the PassPort setup page.
 - Start by connecting to the PassPort's built-in hotspot.
 - Once you've made the necessary changes on the setup page, the PassPort's hotspot will disappear, and you can access it through your Wi-Fi modem/router or the VPN link provided by Smithtek.
 - 3. Ethernet Connection:**
 - The PassPort features an RJ45 Ethernet port for wired connections.
 - You can connect the PassPort to a router with LAN instantly without any additional settings in most cases.
 - However, in some instances, extra configuration changes may be required via the PassPort setup page.
 - To perform these changes, connect to the PassPort's hotspot, configure the settings, save them, and then restart the PassPort.

These options offer flexibility in connecting your PassPort device to the internet, depending on your specific needs and preferences.

PassPort Quick Setup

Power Up / Reset:

Connect power to the PassPort
There are 2 options.

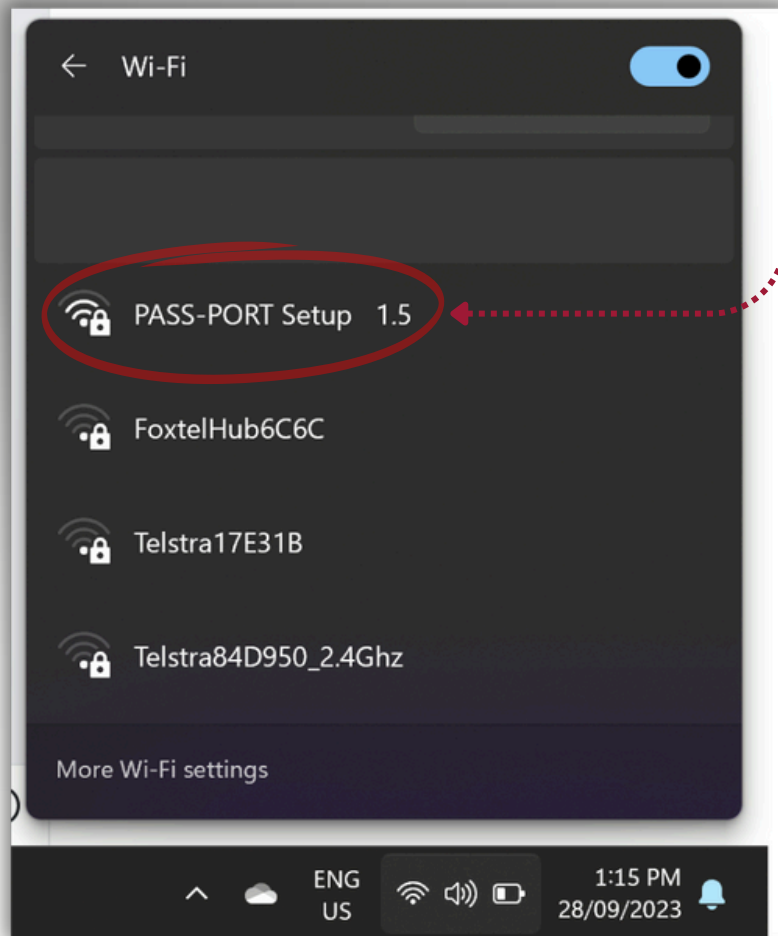

1. 12-24VDC to the green screw terminals
2. 5V USB-C to the side

The reset button is tucked
under the inside of this slot.
Press for 15 seconds if needed

PassPort Quick Setup

Connect to the PassPort Hotspot:

- Using a Wifi compatible laptop, tablet or phone, search for the Wifi Hotspot '**PassPort setup 1.5**'
- Connect to the hotspot. Enter the default password '**passport**'
- Wait 1 minute
- If connected to 'PassPort setup 1.5' go to your web browser and enter the IP '**10.0.0.1**' this will take you to the PassPort configuration page.

ATTENTION

The access IP is : **10.0.0.1**

Node-RED direct : **10.0.0.1:1880**

PassPort Quick Setup

Configuration WiFi:

Select your hotspot

Enter your password

Enter an email here

For a Wifi connection you need select the Hotspot (router) the passport will connect to with internet access.

Enter the Password for this hotspot.

Finally, to find the IP address assigned to your PassPort by the router, run the following command. If the connection is successful, you'll receive an email within 3–5 minutes containing the assigned IP address. Use this IP to access Node-RED, for example: 192.168.1.100:1880

PassPort Quick Setup

Default Gateway:

On occasion some modem / routers require the PassPort network interface (WiFi) Or (Ethernet) to know what its default gateway is.

If you are using Ethernet and get partial connectivity. Select Ethernet as default gateway.

Default gateway
here

ATTENTION

If the PassPort uses the Wifi for internet access, but also at the same time uses the Ethernet for example, Modbus TCP. It will need to know the Wifi is the gateway and the Ethernet is not WAN priority.

Other Settings:

Click here to take you back home to the Wifi config page

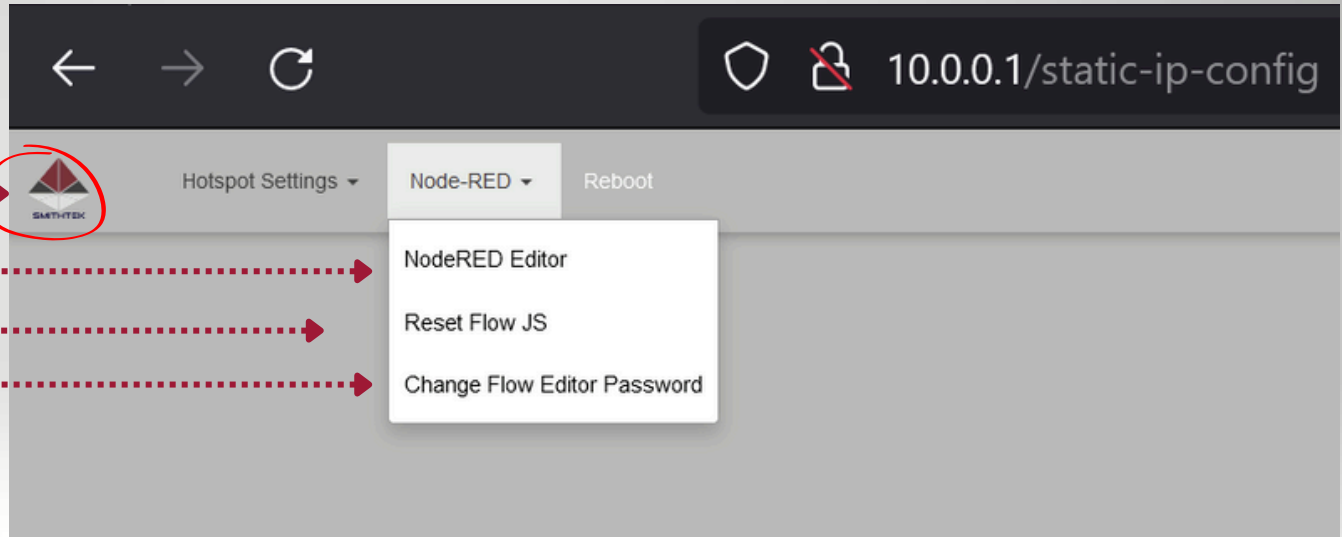

Takes you to NodeRED

Resets your NodeRED flow file

Changes your NodeRED editor password.

Default User: SMITHTEK

Default Pass: SMITHTEK

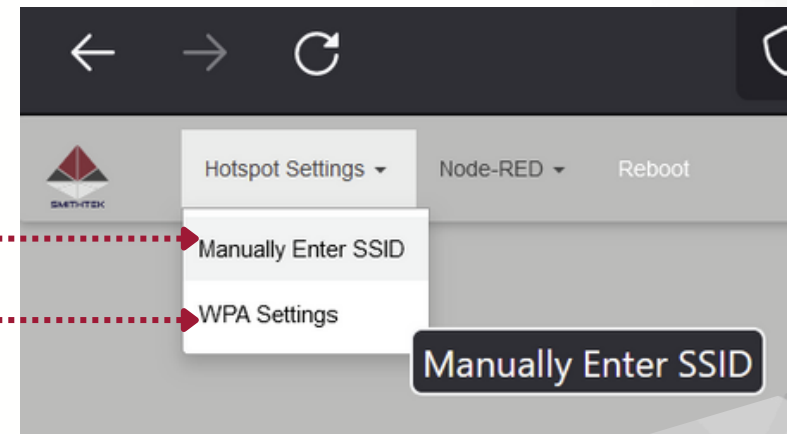

The Manual SSID setting allows you to manually enter a SSID. The hotspot could be hidden and requires the details putting in manually.

The WPA setting allows you to change the PassPort default Wifi password "passport" to your own custom password. This is handy if you want to keep the config portal live but protect from unauthorised access.

- Manual Hotspot SSID
- Create a new PassPort password

ATTENTION

TO MAINTAIN ACCOUNT SECURITY, YOU ARE REQUIRED TO CHANGE THE TEMPORARY PASSWORD. YOUR NEW PASSWORD MUST BE AT LEAST EIGHT CHARACTERS LONG AND EASY TO REMEMBER.

PassPort Quick Setup

Troubleshooting:

Issue	Checks	Fix
I connected the PassPort to a local Wifi but I cannot find the PassPort on my network	<ul style="list-style-type: none">• Make sure the PassPort is within range of your Wifi transmission.• Double check you have used the correct SSID• Make sure the PassPort has adequate power• Make sure the Modem Router is turned On	<ul style="list-style-type: none">• Move the PassPort next to your Wifi and try again.• Press the reset button for 15 seconds and go through the setup guide again
I plugged the PassPort into the ethernet, I can get onto Node-RED but I cannot download new nodes or use IoT services	<ul style="list-style-type: none">• Check the WAN connection is active so the PassPort can see the internet.• If you have setup the Wifi but want to use the Ethernet. Reset the passport• Did you setu the default gateway to both Ethernet and Wifi?	<ul style="list-style-type: none">• If the checks are OK. Set the PassPort to default gateway (Ethernet). Follow the instructions 'static IP' and 'default gateway'.• Remember to only choose 1 default gateway• To complete these settings you must choose a hotspot, but do not enter a password, leave it blank. It allows you to save the new configuration
My Node-RED flow is damaged and locked me out.		Press the Reset for 15 seconds. Access the PassPort setup and reset the Node-RED flow file, follow the instructions 'Other settings'
I forgot my Node-RED flow editor password		Press the Reset for 15 seconds. Access the PassPort setup and rmake a new Node-RED flow editor password, follow the instructions 'Other settings'
I inserted a USB dongle but the internet is intermittent	<ul style="list-style-type: none">• Did you configure the PassPort to use the Wifi?	Press the reset for 15 seconds. Do not configure the Ethernet or Wifi. If needed only configure the WPA Settings to secure your PassPort. Plug in the USB dongle and try again
I have Modbus TCP slave device connected to the PassPort and using the Wifi as the WAN connection for the internet, its not working?		<ul style="list-style-type: none">• Press the reset for 15 seconds.• Configure the PassPort to use its Wifi as default gateway. If possible configure it to have a static IP outside your Modems DHCP range. follow instructions on "Static IP and Default gateway"
